NONE

G. R. Ogden, of Shinnston, W. Va., says: "I have used AVALON FARMS HOG-TONE 56 days and I think it is the best medicine I ever used. I have two pigs 4 months and 3 days old that weigh 360 pounds, one 6 pounds heavier than the other. They are 100 pounds heavier than my neighbor's 2 of the same litter and feed."

This is the experience of a typical user of Hog-Tone. There are hundreds and hundreds of letters on file at the Avalon Farms Company's office from nearly every state in the Union, all telling of big improvement in hogs and in hog profits through the use of Hog-Tone, the scientifically prepared Hog Conditioner, Fattener and Worm Remover. Hog-Tone is sold on

60 days' Free Trial under an absolute money-back guarantee. Come in the store and tell us how many hogs you have in your herd and we will give you enough Hog-Tone to treat all of them 60 days. You don't have to pay for it unless you are absolutely satisfied. The decision is left entirely to you.

A SICK HOG MEANS LOSS

A WELL HOG SPELLS PROFIT

Introduction

IN this directory we have endeavored to give Pike and Calhoun county farmers a complete and reliable directory of the farmers, breeders and merchants of the county, with such other information as will make the directory a valuable reference book.

The task of calling on every farmer in a county and collecting the information for such a directory is a tremendous one. We have received splendid co-operation from the farmers and business men of the county, without which the publication of such a directory would be impossible. In a very few cases we have found farmers unwilling to give the information requested, which accounts for a few names that do not appear.

A few mistakes are bound to occur in a directory that involves so large an amount of work, but we have spared no effort nor expense to make the information complete and accurate, and believe that the mistakes are very few.

We want to speak a word of appreciation for the advertisers whose liberal support has helped materially to bear the heavy expense of publishing this directory, and ask that you favor them with your patronage whenever possible.

We hope and believe that the publication of this directory will be a real service to Pike and Calhoun county farmers and in line with PRAIRIE FARMER's policy of service to the farmers of Illinois. We hope that the increased circulation of PRAIRIE FARMER in Pike and Calhoun counties, which has resulted, will help in the movement for better farming, better farm living, and more prosperity for the counties, and that our many new friends will become permanent members of the big PRAIRIE FARMER family.

BURRIDGE D. BUTLER,
Publisher, Prairie Farmer.

For You, Mr. Farmer!

BANKING BY MAIL SERVICE:

By means of which you can transact your banking business quickly and efficiently.

CERTIFICATES OF DEPOSIT:

As a temporary or permanent investment for idle or reserve funds.

CHECKING ACCOUNT FACILITIES:

To help you finance the farm in a modern, approved manner.

SAFE DEPOSIT BOXES:

For the protection and privacy of your valuables, Liberty Bonds, etc.

SAVINGS ACCOUNT FACILITIES:

For the upbuilding of a substantial financial reserve.

LOAN DEPARTMENT:

which is glad to assist farmers with additional capital when needed at reasonable rates and on acceptable security.

Pike County

By JESSE M. THOMPSON, President Pike County Farm Bureau

Pike county, Illinois, at one time included all of that part of the state between the Illinois and Mississippi rivers from their junction 25 miles above St. Louis northward to the Wisconsin line and eastward to Lake Michigan. The present site of Chicago was once in Pike county.

Pike county is the oldest county in the Military Tract. It was erected January 31, 1821, being the first county organized after the state was admitted into the Union. More than 50 counties have since been carved from the original Pike county.

Pike county was named in honor of Gen. Zebulon Pike, western explorer, soldier of the war of 1812, and discoverer of Pike's Peak. The county is eighth in size in the state, containing 510,764 acres, or 800 square miles, in 24 townships. Its population at the last census was 28,622 and for the past two decades the population has remained practically stable.

Pike county was first settled in 1820, when four sons of Micah Ross, of Pittsfield, Mass., and a few other families started for what was then known as the Far West—the state of Illinois, on the Mississippi bottoms. After months of tedious travel and thrilling adventure, they finally reached the present site of Atlas, in the southwest part of the county, and charmed by the beauty and evident fertility of these wide-stretching prairies, they here pitched camp and began the erection of the first log settlement in the county.

Col. William Ross, one of our

pioneers, later founded the present county seat of the county, naming it Pittsfield in honor of his Massachusetts home, and so indirectly in honor of William Pitt, the "Great Commoner" and friend of America in the years preceding our national birth.

From this rude beginning, as the years pass we see the county emerging from a wilderness state, the red man, the panther and the rattlesnake being pushed back by an onrushing tide of emigrants from Massachusetts and the Hudson valley, from Kentucky and finally, in their "prairie schooners," the early settlers from Ohio and Indiana, who, coming westward over the great National Highway, crossed the fertile plains of Central Illinois to settle in the well-watered timberlands of Pike and other western Illinois counties.

These early settlers were for the most part of the farmer class and timberlands at once began to be cleared for the cropping of the virgin soils. It was early realized that the county would become great in an agricultural way. Farms were quickly hewed out of the wilderness and the raising of grain and livestock got under way, in a rude manner, at first it is true, but gradually improving with the introduction of new machines and new methods, until today Pike county ranks with the foremost counties of the state in its agricultural output.

Pike county's entire population may be classed as rural, although a third of its citizens live in the sixteen incor-

porated cities and villages. Of these perhaps 5,000 are farmers or farm laborers and the other half tradesmen and merchants whose prosperity depends directly on that of the owners and farmers of the 3,510 farms in the county.

Pike county is the leading livestock shipping county of the state. A total of 2,570 cars of livestock was shipped from the county in the 12 months of 1918, according to a county-wide survey conducted by the food administration. Shipments were as follows: Hogs, 130,174 head; cattle, 26,110; sheep, 21,699; horses, 447; mules, 648. Hogs to the value of \$5,003,107.51 were shipped during the year, and cattle of a total market value of \$2,913,876. The total stock output of the county in 1918 brought the livestock producers of the county \$8,368,470, according to the survey, or an average of \$2,384.17 per farm or \$298.87 per capita of population.

Pike county's immense livestock industry is unique in that it is financed entirely within the county. Local banks swing the big proposition. Chicago and other outside banks hold no Pike county paper for financing the biggest farm livestock business in the state.

Pike county's livestock output is largely born, suckled, fed and finished within the county's borders. Her high rank as a stock producing region is induced by her extremely favorable shipping facilities by boat and by three lines of railway which traverse the county and by her favorable topography. Her well-watered native blue grass pastures insure the future of this great industry. The food administration's farm survey reveals that in Pike county there are 147,107 acres of this permanent pasture land, besides 80,000 acres of woodland and waste land adapted to sheep grazing.

The great St. Louis and Chicago livestock markets are readily accessible to the Pike county stock shipper. Great herds of livestock are driven or hauled from miles inland to Illinois river shipping points for shipment to St. Louis or Peoria. Big Illinois river boats loading in the afternoon land the shipper and his herd at one of the best livestock markets in the country the following morning. A total of 21,596 head of livestock was shipped by way of the Illinois river last season.

On last October 15th, a survey made for the food administration by the schoolchildren of the county showed a total of 149,104 head of hogs on the farms of the county, worth at average farm values \$3,429,392. The survey further showed that Pike county farmers purposed to kill 11,547 hogs for home consumption, indicating that Pike county farmers stocked their larders during the past winter with upwards of a thousand tons of home prepared ham, bacon, pork and lard.

Pike county is one of the few million bushel wheat counties of the state. Reports to the food administration from the 73 threshing outfits that operated in the county in 1918, showed a total of 1,016,503 bushels of wheat threshed within the county's borders. The average yield per acre was 18.48 bushels, while in the great wheat basin around Hull, on the west side of the county, the average yield was 23.13 bushels. Wheat was grown in 1918 on 1,300 farms in the county. Eighty-nine Pike county farmers had a crop in excess of 2,000 bushels. A. C. Bancroft, of Kinderhook grew the biggest crop in the county, a total of 6,858 bushels. Pike county's 1918 wheat crop at an average price of \$2.08 was worth \$2,114,326.24.

Pike county is one of the "Big Four" apple producing counties of the

FARMERS AND BREEDERS, PIKE AND CALHOUN COUNTIES

state. A total of 9,000 acres, mostly bluff and hill lands, is devoted to orchard, as shown by the farmer survey. The outlook for the county in apple production is exceedingly good, the hilly lands of the Illinois river bluffs and similar regions being favorable for commercial orchards.

The black cattle breeders of the county have a live organization in the Pike County Aberdeen Angus Association, headed by J. O. Strubinger, of Barry, President, Will S. Loyd, of Pittsfield, vice president, A. W. Butterfield of Griggsville, secretary, and Frank Lawson of Barry, treasurer. Pike county has more members of the American Aberdeen Angus Association than has any other county in the state, a total of 28. Cook is second with 26 and Fulton third with 24.

Dr. Cyril G. Hopkins, head of the department of agronomy at the Illinois State University, says that Pike county has the best soil of any county in the state for the growing of alfalfa. With an alfalfa area at the last census of only 162 acres, the county is steadily increasing its acreage of this great legume, limestone being brought in in car lots to sweeten the acid soils for its propagation. Alfalfa does especially well on the strip of bottom lands above high water at the bases of the limestone bluffs that skirt the great alluvial plains of the Mississippi valley along the west side of the county.

Pike county has, perhaps, the most diversified soil of any county in the state, ranging from the typical brown silt loam of the prairie, the gift of the glacier, through the yellow silt loams or "red clays" of loessal formation, and back again to the rich alluvial planes of the rivers, varied occasionally with sands and post oak silts and buckshot soils of residual origin, and undrained muck swamps. Here the

soil chemist has a wide and interesting range. On the west of the county is the vast fertile flood plain of the Mississippi, a strip about five miles wide extending the entire length (30 miles) of the county and comprising 110,000 acres of almost bottomless fertility.

At the outbreak of the war with Germany, the Government commissioned Hanan C. McCarrel of Kinderhook, as District Emergency Demonstration Agent for Pike, Scott and Calhoun counties. Under his able leadership the county has made great advancement in an agricultural way. There has been a great awakening to the value of alfalfa in the farm rotation and farmers everywhere seem to have had a vision of what may be realized by proper scientific treatment of their soils. So ably has McCarrel preached the need for organization that on May 10, 1919, farmers of the county met in mass meeting at the county seat and organized the Pike County Farm Bureau with an initial membership of 464 farmers, which has since increased to over 500. Of this organization, Jesse M. Thompson, of Pittsfield, is president, E. C. Yockey, of Perry, vice president, A. W. Butterfield, of Griggsville, secretary, C. A. Johnson, of Hull, treasurer; the executive committee comprising also Mrs. R. W. Fletcher, of Kinderhook, in charge of the department of soils, Ernest Gay, of Rockport, in charge of the department of livestock, J. L. Stauffer, of Baylis, in charge of the department of crops, Otho Turnbeaugh, of Nebo, in charge of the department of horticulture, and A. E. Sneeden, of Detroit, in charge of the department of farm management.

The executive committee is at present engaged in looking for a farm advisor who will measure up to the county's needs and its aspirations and who will lead the farmers of the county to still greater things in agriculture.

Binder Troubles and Adjustments

By C. O. Reed, University of Illinois, in Prairie Farmer

To have to await the services of an expert when every minute of the harvest days is money is not only an expensive practice, but in most cases is an unnecessary one if the operator will only use patience and good judgment and try to understand a few very simple principles of what seems a complicated machine. The purpose of this article is to aid the operator in his most common binder troubles. To cover the ground in the most logical and concise manner, let us consider troubles under the three general heads: general binder troubles, binder head troubles and knotter head troubles.

Starting. If possible, start the new machine on a road or in a pasture before going into the grain field. Use plenty of kerosene and run the machine empty for about five minutes, taking notice that every duct to bearings and every oil hole is open. Then apply lubricating oil. When you are ready to enter the grain with a new machine, raise the machine well up, tilt the platform forward; open the throat of the machine by throwing the butt adjuster forward and start in with about one-half of a full swath. After five minutes work the machine is ready for maximum results. If compelled to make a full swath at the start, cut the grain extra high.

Never change the adjustment of a new binder head before going into the field. It may miss a few bundles at first, but do not adjust. Apply a liberal amount of coal oil to the knotter head and the trouble will usually disappear.

New Machine Failing to Start. Occasionally a new machine fails to start due to some part sticking or catching. Throw the binder out of gear and see that the bull wheel revolves without catching. Remove the elevator chain and throw in gear. This will test the sickle. Next put on elevator chain and throw off reel chains. This will test the rollers. Then connect and test the reel. This method will test one part at a time and should

locate the trouble without difficulty. In testing out head for failure to revolve, operate head by hand at back of machine through shaft which drives head from elevator chain.

General Binder Troubles

Chains. Undue wear in chains may be caused by the chain being run too tight or backwards. Run the chain with the hooks of the links leading and with the openings of the hooks out. The use of oil or grease on chains, if the binder is being run in a sandy country or under dusty conditions, is not to be recommended, for the oil will collect the fine particles of grit and cause excessive wear. Under such conditions use dry graphite. Chain jumping is caused by the chain being too loose or by the sprocket being badly worn. If a worn sprocket is the cause for the trouble a new one will have to be supplied.

Canvas Troubles. The creeping of canvases is caused by running them too loose or by the elevators not being square. Test the elevators to see if they are square by means of measuring the diagonals, and then square by the special apparatus to be found for that purpose. Have the canvases of the same tightness on both sides.

Canvases not elevating the grain may be caused by missing slats or loose canvases. Broken slats are generally caused by the elevators not being square, or by the canvases not being buckled evenly and thus the slat is forced to pass over the roller at an angle to it. Chewed slats may be caused by a projecting bolt or the canvas guides being out of shape.

Heavy Draft. Heavy draft may be caused from lack of sufficient good lubricating oil, bull wheel being entered in quadrant wrong; chains, especially main drive chain, being too tight; paint or varnish not being cut out of the bearings; or rollers binding. Apply lubricating oil to the bearings. Enter the bull wheel in the quadrant square. Have the proper tension in the chains. Coal oil will cut the paint

or varnish from bearing surfaces. When machine is empty, operator should be able to move elevators by hand on elevator chain.

Sidedraft. Sidedraft in a binder refers to such resistance of the platform end of the machine as to cause a "dragging" of platform, and hence results in a tendency to run the machine into the grain. It may be caused by (a) grain wheel bearing too light; (b) grain wheel being out of proper adjustment; (c) sickle parts not cutting properly, resulting in a pulling off of stalks rather than cutting; (d) very light grain may give a condition where sidedraft is more noticeable, and (e) a fast horse on the outside may lead the operator to believe he has sidedraft.

Remedies. (a) See that grain wheel revolves freely and perfectly on axle. If axle, bearings and wheel bell are badly worn, replace. (b) The inexperienced operator cannot tell whether a grain wheel is aligned properly or not. It should lead out of the grain slightly, and in case of poor alignment here, an expert must be called. (c) Obvious. (d) Sidedraft here is an advantage rather than an objection for it indicates the best construction. (e) Put fast horse on inside.

If difficulty is experienced in getting far enough into the grain with a tongue truck attachment, make adjustments to increase the angle between the platform and tongue proper, i. e., without changing position of machine make adjustments to let horses away from grain slightly. If machine runs too far into grain, make adjustments to bring horses a little closer to grain line. These adjustments can be found between tongue and stub tongue on the McCormick and Milwaukee binders, and in the truck axle braces on the Deering. If sufficient adjustment is not provided in the Deering to permit a full swath, turn the tongue over.

Badly Shaped Bundles in good grain are caused by improper manipulation of binder parts. Set the reel to strike straws about two inches below the heads. Run the butter as near at right angles to the rollers on tier shaft as possible, even if you have to sacrifice an inch or two in the position of the band on the bundle. Do not expect the butter to

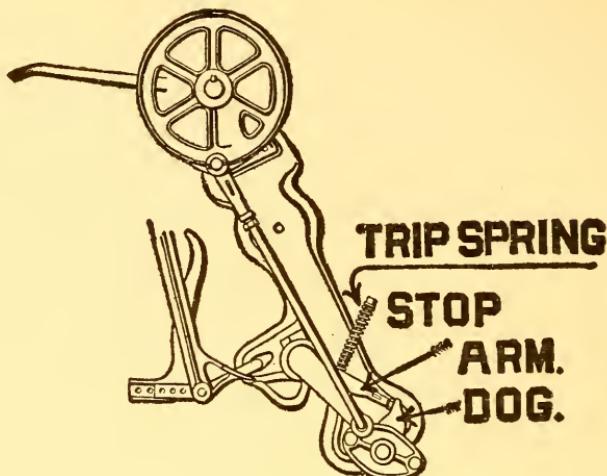

shove the straws down under the breast plate. Adjust the position of the head to bring the straws under the breast plate and then adjust the butter to smooth the butt of the bundle. In uneven grain the head, butter and reel must be shifted often to obtain the best results. In very short grain or in down grain leaning toward the elevators we have probably the worst conditions for good bundle making, especially for eight-foot binders. First, do all possible to retard the heads by running the platform as level as possible and place a rope head-retarder across the platform, tying the same to the outside divided frame. A rope head-retarder is often found to give better results than the retarding strap iron sent out with the machine, but if the latter is used, the operator will find that he gets very good results in retarding heads by bending up or crinkling the end of the strap iron. Throw the head as far forward as possible and run the butter as near perpendicular to the rollers as possible to still have the bundle securely tied. Tighten the front grain check.

Badly Shaped Bundles in Long Tangled Grain can be remedied by loosening all grain checks slightly and by adjusting the head to tie a smaller, looser bundle.

Getting Grain Down to Packers. Trouble is sometimes experienced in getting light, fluffy grain down to the packers. See that the deck roller is working properly and lower the deck cover.

Choking Down. Sometimes in heavy, fluffy and tangled grain, and often in flax, the head cannot discharge a bundle and is stopped by "choking." Adjust the head to tie a smaller, looser bundle, loosen all grain checks and loosen the tension on the compressor spring, which is the spring attached to the compressor rod.

Bundles Too Loose or Too Tight. Tighten or loosen the trip spring shown in Illustration 1 and described below under "Binder Head Troubles." Do not attempt to make a tight bundle by tightening the twine tension on the twine can. The twine tension is not for the purpose of affecting the

tightness of bundles and if it is used for such purpose serious needle troubles will result. The twine tension should be sufficiently tight to keep back slack in the twine between the can and needle.

Bundles Too Large or Too Small. Move the compressor arm nearer or farther away from the needle. The compressor arm is that arm against which the bundle is formed and as it is moved in or out that space in which the bundle is formed is changed.

Reel Troubles. Short oats is often the cause for considerable reel trouble, especially reel breakage on those machines which have no outside reel support. The operator cutting short oats will necessarily have to tilt his platform well forward and run his reel low. This means that occasionally the reel slats will whip down onto the guards and result in broken parts. Farmers in some localities have solved this difficulty by tacking on to each reel slat a piece of heavy linoleum about six inches wide. The reel can then be run higher, for this extra piece on the slats serves admirably to force the grain over onto the platform and at the same time is sufficiently flexible to give if the reel is whipped down on the guards.

Binder Head Troubles

Before taking up binder head troubles let us refer to the first illustration and get clearly in mind the exact function of the parts mentioned.

Every operator is aware that his packer shaft revolves continually and that at certain moments it must drive the whole binder head while the bundle is being tied and cast. The dog, shown in the illustration, is that mechanism which throws the head in motion with the rest of the machine, or it is that mechanism which momentarily engages the head with the continuous motion of the packers while the bundle is being tied. Sufficient pressure by the straw on the trip arm raises the stop arm, shown in the illustration, which allows the dog to be forced into the path of the continually revolving binder head driver. A little spring attached to the dog forces the dog into the path of this driver when the dog is released, and this same spring holds the dog in this path until the stop arm can drop back into place and force the dog back out of the way of the revolving drivers of the packer shaft. When the dog is thrown back out of the path of the binder head drivers, the motion in the head ceases and the dog, if properly working, must remain engaged with the packer shaft until the discharge arms make a complete revolution. The continuity of motion in the head depends upon the dog.

Discharge Arms Fail to Start or Fail to Revolve Completely. This is a dog trouble. See that the dog spring is in place and is of sufficient strength to hold the dog in the path of the binder head drivers when the dog is

released. See also that the striking faces of the dog and dog driver are not worn sufficiently to permit them to slip by one another. If the discharge arms revolve by jerks it is very probable that a worn condition in the striking faces is the cause.

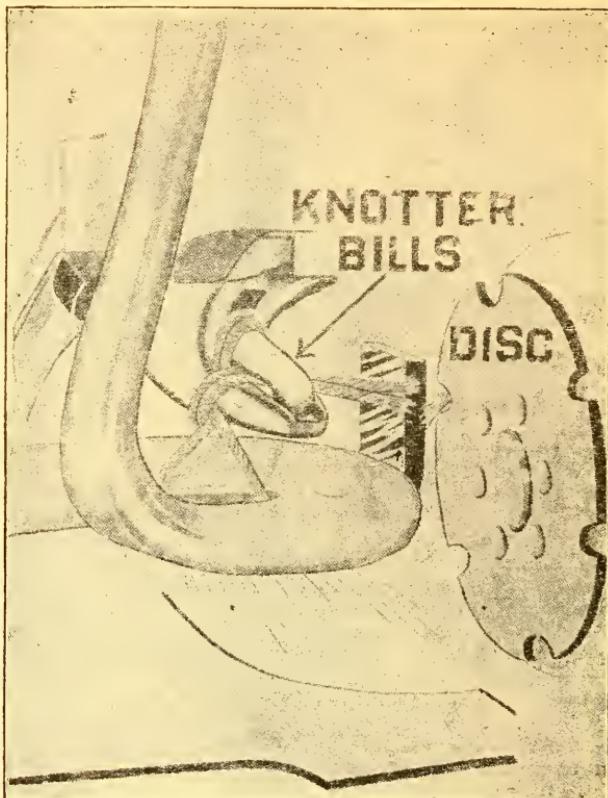

Discharge Arms Revolve Continually. Before discussing this trouble a word should be said regarding timing. It will be noticed that every part of the binder head except the packers works at a certain moment in relation to other parts. The dog makes a certain number of revolutions before the stop arm is allowed to drop back into place to throw the dog out of engagement with the binder head drivers. Hence the relation between the stop arm and the dog is a set relation maintained through beveled gears. If for any reason these gears are separated and not put back in the original definite relation to each other, the head is said to be out of time. This means that the stop arm would not be in place at the proper moment to throw the dog out of engagement and a second revolution of the discharge arm immediately follows the first. The timing principle holds true in all makes of heads and is obtained in a way more or less common in all types, though the mechanism will vary to some degree in its shape and position. If the discharge arms revolve continually the head may be out of time or the stop arm face may be so badly worn that it allows the dog to slip by when the two come together. If the machine is out of time, i. e., if the stop arm is not in place to throw the dog out in the proper time, time the head by properly meshing the beveled gears between the packer shaft and the binder head counter shaft which runs up to drive the tier shaft. If the striking faces between the dog and the stop arm are so worn that they slip by one another, file the faces to their original form. If this allows too much play or looseness in the dog (which can be tested by taking hold of the discharge arms to determine whether they are tight or loose) a new dog or perhaps a new stop arm must be purchased. Some machines permit lengthening of the stop arm. Look for such adjustment and use same to hold the dog back tighter.

Casting Very Small Bundles. There are two causes for this trouble. The dog may not be thrown out at the proper time, and the remedy for such a condition has been just stated above. Small bundles often appear in badly tangled grain when the case bundle is not cleaned from the machine and its weight trips the head again immediately and a small bundle is cast which seems to be really a part of the first. Manipulate the machine to make a clean bundle, loosen the grain checks, adjust the trip spring to tie a looser bundle and adjust the compressor arm to tie a smaller bundle.

Discharge Arms Not Set Tight, or Dog Drive Strikes Dog. Usually these two conditions accompany one another and are due to extreme wear in gears and dog, or tier shaft lock may have become loosened. The tier shaft lock is usually a little dog working behind the tier shaft cam wheel at the end of the tier shaft. It holds the discharge arms in place when they are at rest. Examine your binder head for this mechanism and if it can be adjusted usually the trouble can be remedied by such adjustment. If the cam track in tier shaft cam wheel acts as the lock, new parts may have to be added to relieve badly worn conditions, but this will not necessarily remedy the striking between dog and driver. If head is very badly worn and all gearing has considerable play, the dog may be advanced one cog which will bring the head into better time. Great care must be used in doing this, however, for it often happens that a head so treated will work perfectly when operated by hand, but when driven by the packer shaft under actual conditions the tier shaft is not compelled to complete its revolution and this is not "driven home" and locked. This will then result in the discharge arms dropping down and in greater interference between dog and driver. It is sometimes found necessary to replace badly worn gears, in order to entirely eliminate this trouble.

Knotter Head Troubles

All binders are very similar. They combine the same principles, and although the detail of the mechanism may differ somewhat, still for every vital part on one make of machine

there can be found on each other machine a part similar in function, very similar in shape, and often very similar in position. This is particularly true in the knotter head or that portion of the binder head which ties the knot. In discussing these troubles then, let us bear in mind that every make of binder has in some form each part shown in the second illustration, and that the functions of these parts are the same though the position and shape may vary slightly.

The disc is that part which holds the end of the twine while the bundle is being formed. The bills, also shown in the illustration, are those parts which tie the knot. It is the function of the needle to bring up the needle end of the band, place it over the bills and into the disc where the disc catches it and securely holds both ends. The bills then revolve, forming a loop about themselves, and after revolving part way they open, seize both ends of the band, as shown in

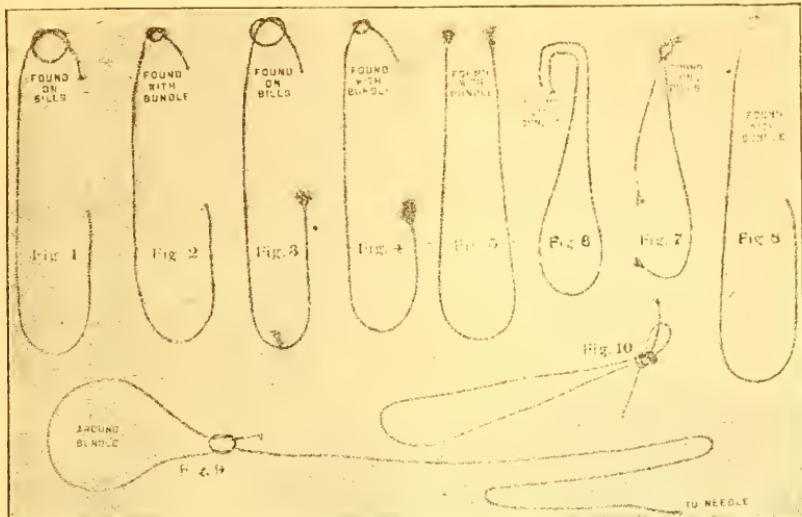

the illustration, and hold the ends of the band while the stripper arm pulls the loop off the bills—hence the ends of the band are pulled through the loop and the knot is tied. If these operations are kept clearly in mind the operator will find his tying troubles greatly simplified.

Each operator should be able to tell just where his trouble lies by examining the failing band and noting where it is found.

In the third illustration, Figure 1 found clinging to the bills with the simple knot tied around the bills and the loose end cut square and smooth, indicates that the disc spring is too loose and the twine tension is too tight.

The same band found cast with the bundle instead of clinging to the bills would indicate that the disc is but slightly loose, yet too loose. The band indicating such trouble is shown in Fig 2.

Fig. 3 found clinging to the bills

but with the free end crushed and ragged indicates that the disc is too tight and that the twine tension is also too tight.

Fig. 4 found cast with the bundle instead of on the bills indicates that the twine tension is perfect but that the disc is slightly too tight.

Fig. 5 found with the cast bundle and with both ends crushed and ragged indicates that the disc is very tight.

Notice the bent crinkled ends in Fig. 6 and that the band is formed with the bundle. The ends have been in the knot but have pulled out. The bills may be too loose or the "hump" on the underside of the upper bill may be worn away sufficiently so that the bills cannot hold the ends of the band securely enough when the loop is pulled off. This probably has caused a loose knot which pulled out when the bundle spread. If the bills are too loose tighten the bills spring. If the little "hump" is worn away file away a little of the stock behind the hump, using a rat-tail file.

Fig. 8 is the familiar band which seems to be tied perfectly when the bundle is first cast, but when the shocker grasps the bundle the band gives way and appears as shown. If the disc is at the proper tension, then the trouble is probably that the bills do not open wide enough to grasp both ends of the twine in the disc. If the bills cam roller on the back of

the upper bill is worn one-sided, supply new parts. If the whole bills shaft has dropped down due to wear below the bills, pinion gear, place a very thin washer under pinion to bring the bills up against knoter head frame where they belong. It sometimes happens that a very loose twine tension allows sufficient slack in the twine to arch slightly over the bills instead of being pulled down tightly over them. The upper bill will then nose in between the bands' ends instead of grasping both of them and a simple slip knot is tied instead of a hard knot.

Fig. 9 indicates a needle trouble. For some reason the needle has not placed the twine in the disc. Most likely the needle has carried up some green stuff of some kind which momentarily clogs the disc. If this band occurs frequently, however, then probably the eye of the needle has become so badly worn back, due to too tight a tension, that the needle can not advance far enough to place the twine in the disc. The needle should advance until it just barely touches the stripper or breast plate. If it does not advance that far it is probably slow and the needle pitman should be shortened slightly.

Make all binder head and knoter head adjustments gradually. A quarter of a turn of the studs on the disc and knoter bills springs is ample to remedy most troubles in those parts.

Corn Planter Adjustments

By C. O. Reed, University of Illinois, in Prairie Farmer

Not all of our implement troubles are to be found in the plow or in the binder. The corn planter has troubles of its own, and it is the purpose of this article to discuss some of the corn planter principles and troubles that are often misunderstood.

Accuracy in Drop

Some corn growers say that accuracy of drop is not an important factor with them because two kernels in one hill and four in the next gives an average of three kernels per hill and that is the number desired. The fallacy of this statement is very apparent when we stop to consider that in such planting we have not the desired three kernels in either hill; and if the soil is three-kernel soil, two kernels per hill are too few while four kernels are too many. The result is probably a loss in each hill.

A certain soil may give the best yield with either two, three or four kernels per hill, but after it has been ascertained which number of kernels is best every effort should be made to secure that number in each hill where the soil conditions remain constant. The variable drop devices on planters afford ample opportunity to shift from two to three or from three to four kernels per hill as the soil conditions through the row may demand, but the advisability of permitting inaccuracy in drop from hill to hill is questionable.

The first two requisites for accuracy in drop are (a) seed of uniform size, and (b) the selection of the proper seed plate. Hand tipped and butted corn or machine sorted corn will give seed as uniform in shape and size of kernel as is practical, but unsorted seed may be relied upon to cause inaccurate dropping.

Testing out the planter to make sure that the proper plate is used is to be strongly advocated. Last year's plate may not be the best one for this year's seed, for if there is a slight difference in the average size of kernels between the two years, a corresponding change may be necessary in

the size of the seed pits in the plate used. The following table taken from laboratory tests shows the danger of carelessness in selecting the seed plate. The planter was set to drop three-kernel hills, and the plates "small" and "large" were plates next size smaller and next size larger than the proper or right sized plate found.

	Right	Small sized	Large
	plate	plate	plate
Per cent of blank hill.....	9.34	.00	.00
Per cent of hills containing 1 kernel	29.36	.26	.28
Per cent of hills containing 2 kernels	37.54	8.66	5.3
Per cent of hills containing 3 kernels	20.48	88.12	81.28
Per cent of hills containing 4 kernels	2.66	2.84	11.48
Per cent of hills containing 5 kernels62	.12	1.66

These figures tend to show that a slight mistake in plate selection may lead to a direct loss in stand. There may be but a very slight difference between two pairs of plates—so slight perhaps that we can not detect the difference by eye—but a test of the two pairs will quickly show that one of those pairs means a good drop while the other pair is dangerous and its use should be avoided. Testing can be done when time at the barn permits and will not only mean a saving of time in the field but will also enable the operator to avoid a mistake before it is too late.

Each operator will have his own method of testing out the planter but he should heed these three rules: (1) Let each test consist of at least 50 or 60 hills; (2) run the planter parts at field speed; (3) do not give up until the best plate is found. Probably the quickest way to test is to run the planter in the farm yard, providing the chickens do not get the corn before we can count it. Rainy day testing on the barn floor is a little more troublesome but can be very successfully accomplished by two persons as follows: Jack the planter up over a blanket stretched tight on the floor so that the furrow openers will be about three inches above the blanket when

the depth lever is thrown forward. One man can then turn the drive wheel, trip the check arm and call out the number of kernels dropped, while the second person records the count. After each hill is dropped the kernels are brushed away by foot of the man turning the drive wheel. Glancing at the drop without recording the count simplifies the process but it is not an accurate method and should be avoided when possible.

Accuracy of drop may be secured further by keeping the seed hoppers at least half full at all times.

Blank Hills at the Ends of Rows

Accuracy of drop depends also to some extent upon the speed of the valve. It sometimes happens that at one end of the row we will happen to stop the team just as the button on the check wire has begun to force the check arm. The valves work so slowly at such a time or stop at such a point that in some planters the seed at the top of the boot drops clear through to the ground instead of being intercepted at the bottom of the boot. Two hills drop at once, then, and when we have turned around there are no kernels at the lower valve ready for the first hill on the return trip. On some planters we may overcome the difficulty by foot dropping one hill while the team is turning. On other planters the only remedy is to stop sooner at the end of the row or to drive ahead at usual speed until the wire has released the check arm.

Accuracy in Check

Considerable attention is usually given to securing accurate checking,

but a word regarding the adjustment will not be amiss. Accurate checking means possibility of closer cultivation and less loss by cultivating out hills. The manufacturer has found that under usual conditions the check wire will travel from one to three inches across the field, and inasmuch as the slack will always be ahead of the machine, he designs his planter to drop the hill at a distance behind the button equal to one-half the travel. On the return trip the hill is again dropped behind the button and thus the hills should check in spite of the wire travel. It can readily be seen then that if our shoes or furrow openers are dropping nearer to or farther away from the button than half the wire travel, our system for securing good checking will be materially interfered with and adjustments must be made at A in Fig. 1.

This tongue adjustment will vary on the different makes of planters. On some it is at the rear end of the tongue, but it will be found on all the popular makes. As a rule the front frame of the planter should be run level, and it can be so run with a properly drawn check wire. But different tensions on the wire drawn by different drivers may necessitate throwing the front frame slightly out of a horizontal position. If the planter drops too close to the button, make such tongue adjustment as will drop the furrow openers back a little toward the wheels. To some extent tightening the check wire will accomplish the same result in the check. Forcing the furrow openers a little ahead by means of the tongue adjustment will cause the hill

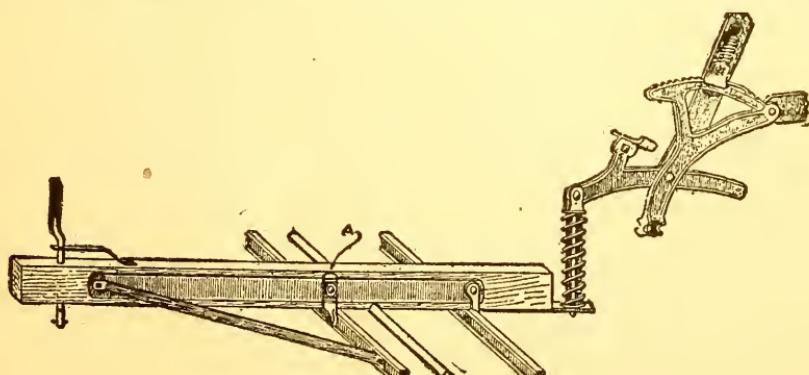

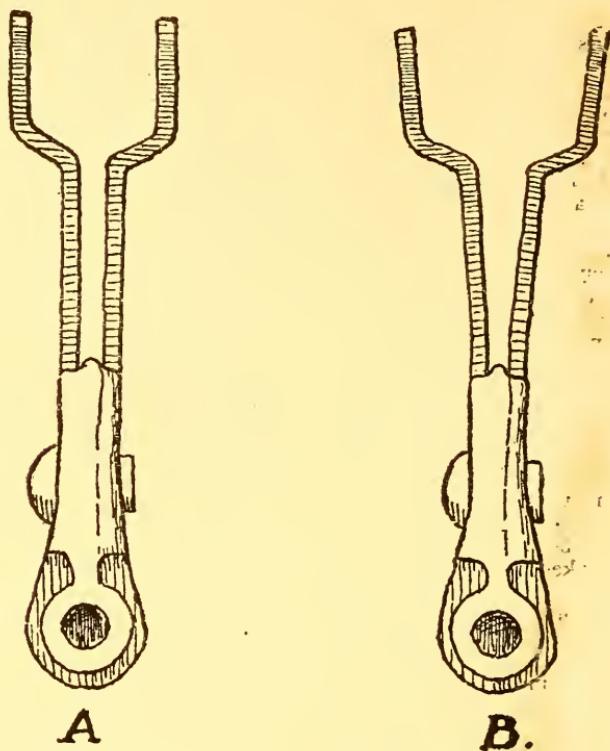

Fig. 1. Tongue Adjustment to Secure Accurate Checking

A Spread Check Fork May Cause Stringing

to be dropped a little close to the button, or having the check wire a little more slack will have the same result in the check. In testing for accuracy of check by digging up hills, select hills pretty close behind the planter. Adjusting the neckyoke straps will also affect the check. The adjustment shown in Fig. 1 is also a means of maintaining a good check when different heights of teams are used and when the difference cannot be compensated for by adjusting the neckyoke straps.

Uniform tension in the check wire must be maintained if accurate checking is to result. Some drivers even go so far as to make allowance for the expansion and contraction of the check wire due to varying temperature from day to day, but this is getting too particular to be practical. It is practical, however, where planting is being done up and down a slope, to pull the wire tighter when setting the high stake.

Uniform Depth of Planting

In planting over a rough field, a more uniform depth can often be secured by floating the furrow openers, but when this is done the operator should keep the openers under foot control so that the shoes may be forced to their depth in dry spots and kept from planting too deep in moist, soft spots. There are a number of shoe gauges now on the market which attach to shoes to insure uniform depth when floating is desirable. Such attachments should prove valuable if properly used where the conditions demand. Stringing of the hill may be caused by (a) dirt in the boot, and (b) by a spread check arm. Trouble from the first cause will probably be due to the team having set back on the planter while the shoes were still in the ground. Clean out the boot bottom thoroughly and the rest of the remedy is obvious.

Trouble (b) is less easily detected. If the check arm is spread as is shown at B in Fig. 2, the wire button will let go of the check arm before the valves have been forced wide open, to the result that the kernels will be strung out in the row rather than being dropped well together. By means of a hammer, drive the arm halves together to their original position, but in so doing care must be taken not to get the halves so closely together that binding of the wire will result. The check arm halves can be left straight as shown at A in Fig. 2. Some operators find that stringing is due to a badly worn shoe. If this is determined to be the cause, new parts must usually be supplied.

Clutch Troubles

Clutches on the various planters differ so widely in design that no specific rules can be given that would apply to all makes. Failure of the clutch to grip or release can often be overcome by thoroughly cleaning the parts, and if the striking forces are worn round, new parts may have to be secured. On most planters this means but slight expense and a little patience.

Timing the Plate Rims

Breakage may necessitate removal of the rim which drives the plate. This rim is timed with the pinion on the shaft which drives the plates from the clutch, and when the rim is replaced on the machine the "time" must be re-established. If the plate rim is out of time with the pinion, inaccuracy will result because the plate itself will not stop at the proper time.

On some machines the cog teeth of the rim and pinion are so marked or constructed that it is very easy to ascertain the proper relation between the two castings. Before removing the rim the operator should carefully seek any such guides so that he may know just how to replace the parts. If no guide is found on the arm and on the shaft pinion, make a mark on each by means of a cold chisel, and then in replacing parts bring these two marks into the same relation to each other as at first. It sometimes happens that after replacing a rim or adding a new one, it breaks as soon as it revolves. This is due to non-timing.

The question is often asked: "Is the disc furrow opener preferable to the ordinary shoe runner?" The single disc opener has better penetration than the shoe and will cut through trash to better advantage, but it throws the soil to one side and covering is made more difficult. The double disc has less penetrating ability than the single disc, but covering can be more easily accomplished after it.

In hard, thrashy ground, then, the disc opener should prove preferable to the shoe opener, but in a well prepared seed bed, well free from surface trash, the shoe is strongly advocated because of its simplicity. The planter with disc openers cannot be considered a heavy draft implement, but the discs carry bearings which must work in soil and one may always expect trouble with such a combination.

MRS. LENA STEVENSON MANN

Household Editor of
Prairie Farmer

Livestock Farmer's Medicine Chest

By Dr. A. S. Alexander, in Prairie Farmer

When a farmer can employ a competent graduate veterinarian at reasonable expense it always is best to do so, and in all serious cases such expert help should be used even if the expense will be considerable. Unfortunately it is not always possible to find such an expert or he may live at such a distance that an ordinary or trivial case will not warrant the expense of his employment, or the nearest veterinarian may not be a properly qualified practitioner, or is one in whom the stockman has no confidence.

For these reasons every owner of animals should keep some simple remedies on hand, and these are necessary even on farms where professional assistance can readily be had. It should be understood, however, that the untrained farmer should not attempt the administration of strong poisons, alkaloids and many preparations used hypodermically by a graduate veterinarian. Such preparations are extremely dangerous in the hands of the layman and are liable to do much more harm than good. The trained surgeon also should be depended upon for all major operations.

A cupboard may be set apart for storing medicines in a cool, dry place and where freezing will not occur in winter. A glass graduate and scales will be necessary for measuring and weighing medicines. Powdered drugs should be kept in tightly closed glass fruit jars and should be plainly labeled. They may soon lose their strength if exposed to the air. Poisons should be kept on a separate part of a shelf partitioned off for the purpose and away from simple, harmless drugs. Ointments, with the exception of fly blister, should be made up fresh at time of use. Liniment may be prepared and kept indefinitely if well corked.

The medicine case should also have a special division in which to keep a few instruments, bandages, suture silk and absorbent cotton; or better still, these may be kept in a handbag for immediate use as required. The emergency bag should contain a roll

of absorbent cotton, several rolled three-yard bandages of unbleached muslin in strips three inches wide, a pound or two of oakum, a spool of strong suture silk, half a dozen suture needles of assorted shapes and sizes, most of them large; a half-ounce, short-barreled, strong-nozzled hard rubber syringe, a two-ounce metal syringe, a cow trocar and canula for tapping a bloated animal, a pair of curved shears, a combination operating knife containing a curved bistoury, a probe pointed bistoury and a strong straight scalpel, a few milking tubes and a teat bistoury, an artery forceps, metal probe, castrating knife and pair of horse clippers.

These will suffice, but there are many other useful instruments such as a clinical thermometer, horse trocar, catheter and dentistry "float," which may be added from time to time. Some of the medicines to be listed later may also have a place in the emergency kit or bag, notably those needed for the treatment of wounds, and at hand should be a strong quart drenching bottle and ten feet of quarter-inch cotton rope with which to hold up a horse's head for drenching. A veterinary force pump is added on a large farm, but its place may be taken by three feet of new lawn sprinkling hose fitted with a large tin funnel. This is used to give a horse or cow a rectal injection. There should also be a six-foot piece of new half-inch rubber tubing for use in giving a cow or mare a vaginal injection.

Simple necessary medicines may best be listed under the following special heads:

Physics

Epsom and Glauber Salts. Average dose for an adult cow, one pound in three pints of warm water. Dose for a horse, 12 ounces.

Castor Oil. Especially useful for young animals. Dose for a calf or foal, from 1 to 6 tablespoonsfuls shaken up in milk.

Raw Lensed Oil (not boiled, which is poisonous). Average dose, one pint for constipation and to follow a dose of colic medicine, or contain medicine for colic.

Barbados Aloes (freshly powdered). Average dose, one ounce, to be given to an adult horse as a "physic ball."

Wound Medicines

Keep in stock one pint each of carbolic acid and coal tar disinfectant and a gallon can of the latter for dipping and disinfecting purposes. Two teaspoonfuls to a pint of water ordinarily makes a sufficiently strong solution. Bleeding is stopped by applying Monsel's solution of iron on oakum or cotton batting, or applying Monsel's powder. As a wound lotion also keep on hand a mixture of one ounce of sugar of lead and six drams of sulphate of zinc in one pint of water. This is called "white lotion" and should be plainly labeled "poison" and well shaken before use.

Dusting Powders

A dusting powder of equal parts of slacked lime, charcoal and sulphur is useful for application to surface wounds and sores. Boracic acid also is needed and a little iodoform may be added to keep flies away.

Liniments

Keep on hand a pint (pound) each of turpentine and aqua ammonia. One ounce each of these mixed with a pint of soft water, in which two raw eggs have been shaken up and the mixture left for 24 hours, will make a good stimulating liniment; or one ounce of each may be mixed with 6 to 14 ounces of raw linseed oil to make a very strong or comparatively mild liniment.

Lotions

"White lotion" for wounds has already been mentioned. Equal quantities of lime water and raw linseed oil make "carron oil," an excellent lotion for burns. Two to four ounces of Goulard's extract and one to two ounces of glycerine in one quart of soft water form a useful lotion for scratches and mud fever of itchiness and "gumminess" of the legs. A good lotion for inflammation of the udder

is made by mixing together one part each of fluid extracts of poke root and belladonna leaves and one part of turpentine with five parts of sweet oil, melted lard or camphorated oil. It is made weaker or stronger as required. Anodyne lotion for painful swellings is made by combining equal quantities of tincture of opium, aconite, belladonna and druggists' soap liniment. A small quantity of chloroform may be added. Mouth lotion consists of an ounce of powdered borax or alum in a quart of soft water; eye lotion of half a dram each of sulphate of zinc and fluid extract of belladonna in a quart of soft water.

Tonics

Fowler's solution of arsenic is a good general tonic for rundown, thin, hidebound horses and those afflicted with chronic skin diseases or heaves (broken wind). The average dose is half an ounce (one tablespoonful) given night and morning until one quart has been given. The medicine may then be gradually discontinued, taking at least a week to the work. Dried sulphate of iron (copperas), dose one dram night and morning, is another good tonic, commonly combined with an equal dose of ground gentian root or ginger root, nux vomica, saltpeter and fenugreek as a condition powder. The dose is one tablespoonful of the combination of drugs mixed in the feed night and morning for ten days. Omit sulphate of iron for pregnant animals. Nux is poisonous and must therefore be given with care. It is most useful as a nerve tonic and appetizer.

Colic Medicines

Keep in stock one pound each of laudanum (dose, 1 to 2 ounces); essence of ginger root (dose, 1 to 2 drams); sulphuric acid (dose, $\frac{1}{2}$ to 1 ounce); turpentine (dose, 1 to 2 ounces); granular hyposulphite of soda (dose, 1 to 4 ounces). A dose of each of the first three medicines in a pint of water containing two ounces of hyposulphite of soda will prove effective for most colics. Two ounces of turpentine in a pint of raw linseed oil may be given for "wind" (flatulent) colic, or following the other medicine when the pain of "cramp" (spasmodic) colic has subsided.

Fever Medicines

Powdered saltpeter is an important drug for animals. It is given in the fever of influenza, founder (laminitis) or lymphangitis (milk leg, also for stocking of the legs and other large swellings. A dram is the average dose. Give it every four or six hours in fever, twice daily for swellings, or with tonics as a condition powder, and in double doses for founder or milk leg. Do not give it in colt distemper, when abscesses are forming. It may often be administered in drinking water or a bran mash or damp feed. It also is given in tablespoonful doses once or twice daily for garget of the cow. Beware of aconite often given for fever. It is too dangerous a poison to be safely used by anyone other than a trained doctor.

Blister

An effective blistering ointment is made by melting together three parts of lard and one-quarter part of finely shaved, yellow beeswax, and then stirring it one part of powdered cantharides (Spanish fly). Stir in a tin dish until cold, then store in a capped glass fruit jar. It improves with age. When using this blister clip off the hair, wash the skin clean, dry it perfectly. Tie the horse up short in his stall, rub the blister in for fifteen minutes and then smear on some more blister. Wash the blister off in 48 hours and then apply a little lard daily. Do not cover a blistered part, or rub it on the loins, or on top of the hips, or use it after a poultice, or on irritated skin, or in very hot or cold weather.

Absorbents

Never be without tincture of iodine to swab on swollen glands, tumors, forming abscesses, bony growths, capped or puffed joints, indolent sores or wounds, cancer of the mouth in pigs and ringworm spots. It also is useful to inject into abscesses, fistula and lump jaw cavities. Iodine ointment is made by mixing one dram each of iodine crystals and iodide of potash in one ounce of lard. This is used on swellings, sore necks and shoulders, puffs of all sorts, tumors, forming abscesses, ringworm spots and enlargements of the udder. As an absorbent blister rub up one dram

of biniodide of mercury with two ounces of the fly blister already mentioned and use on bony growths, such as splints and ringbone, callouses, indolent sores, tumors of the udder.

Worm Medicines

Gasoline is kept on most farms and in tablespoonful doses in six ounces of milk is the best remedy for stomach worms in sheep. Lambs take less in proportion. Two ounces of turpentine in a pint of raw linseed oil is effective as a starting dose for a "wormy horse." Follow with worm powders composed of equal parts of salt, sulphur and dried sulphate of iron. Dose, one tablespoonful night and morning for a week, then skip ten days and repeat. Omit iron for pregnant animals. For worms of swine give one teaspoonful of turpentine in slop for three consecutive days for each eighty pounds of body weight; or one dram of dried sulphate of iron in slop for five successive mornings for each hundred pounds of body weight. Where swine are known to be seriously infested with worms, give eight grains of santonin and five grains of calomel in a little slop for each hundred pounds of body weight. Divide the pigs into lots of five and give the medicine in a little slop after starving the animals for eighteen hours. Care must be taken to give only the doses here prescribed, else damage may be done.

Disinfectants

In the paragraph on wound medicines it has been advised to keep carbolic acid and coal tar disinfectant in stock. To these may be added formaldehyde, bichloride of mercury tablets and permanganate of potash crystals. In disinfecting a stable a solution of four or five ounces of formaldehyde to the gallon, or a 1-1,000 of bichloride of mercury (corrosive sublimate) or a 1-30 solution of carbolic acid or coal tar disinfectant should be used after a thorough cleaning of the premises. For wounds a 1-1,000 solution of corrosive sublimate also is the most effective disinfectant and a 1-500 solution should be used for disinfecting when a spore-forming germ, like that of anthrax, is present. Permanganate of potash is a useful mild disinfectant (antiseptic).

and deodorizer) in a 1-5,000 to a 1-50 solution. The weaker solution is used lukewarm for vaginal injection purposes, while the 2 per cent solution is useful for injection into cavities from which come bad-smelling discharges and for swabbing sores (cankers) of the mouth. As a wound lotion it is usual to employ a 2 to 5 per cent solution of carbolic acid, or lysol, or coal tar disinfectant. Carbolic acid is also much used as an internal disinfectant in contagious abortion. Two drams of the acid is well diluted with water and mixed in soft feed for each pregnant cow every other night throughout pregnancy. Peroxide of hydrogen one part and clean water two or three parts is a popular disinfectant for cleansing foul wounds.

Scour Medicines

The farm medicine chest would not be completely stocked without some remedies for diarrhoea or scours. A mixture of one part of salol and two parts of bismuth (first prescribed years ago by the writer) has become a standard remedy among farmers. The average dose is one teaspoonful given two or three times a day and washed down with milk or water. The dose may be doubled in bad cases and for larger calves and foals. Prepared chalk, powdered alum, sulphur, powdered catechu, rhubarb and ginger root are also much used for diarrhoea.

Administering Medicines

Small doses of liquid medicine, such as the average two-ounce dose of a fever medicine or tonic solution, are best given by means of a half-ounce hard rubber syringe. Expert veterinarians sometimes give such medicines of bad-tasting drugs in gelatine capsules, or in form of a "ball." Worm, condition and tonic powders are mixed in damp grain feed. A large dose of liquid medicine is termed a "drench" and is given from a strong, long-necked bottle. A few inches of rubber hose may be fitted on the neck of such a bottle.

To drench a horse, back him into a stall, place a running noose of soft, small cotton rope or "clothes line" upon the upper incisor teeth, under the upper lip, and draw the noose tight, with the knot of the rope to the front. Throw the loose end of

the rope across an overhead beam, raise the horse's head, hold it there by means of the rope and pour the medicine into the mouth a little at a time until all is swallowed. Do not squeeze the throat of the horse when giving medicine and never pour the medicine into the nostril. If the horse will not swallow, pour a teaspoonful of cold water into a nostril and swallowing will instantly occur.

To drench a cow, place her in a stanchion or tie her in a stall. Walk up on her right side (milking side). Pass the left hand across her face and into her mouth. Hold her head in a straight line forward and slightly elevated, not turned to one side. Pour the medicine very slowly into the right side of the mouth. Let the head down instantly if the medicine causes the cow (or horse) to cough. Fluid given too fast passes into the paunch and is practically wasted. Administered slowly, it largely goes to the third and fourth stomachs and absorption takes place in the latter.

Sheep have to be very carefully drenched from a bottle to avoid choking. Swine take medicine through a hole cut in the toe of an old shoe thrust into the mouth or from a short, strong rubber hose fitted in the neck of a strong bottle. Dogs take medicine in capsules inserted in meat or from a bottle or spoon emptied into a pouch formed of the lip and cheek.

Avoid "doping" animals unnecessarily. Medicine should only be given when the animal is sick, should be the right medicine, and is best prescribed by an expert.

VALUE OF LABOR

The United States Department of Agriculture found in 1855 that it required four hours and 34 minutes of human labor to produce a bushel of corn. At the Minnesota experiment station it has been found recently that 45 minutes of human labor is about the average time required for the same work. In other words, human labor is worth six times as much as it was 60 years ago, due to the use of better machinery, better varieties of corn and better soil management.

Some Common Unsoundness

By Dr. A. S. Alexander, in Prairie Farmer

TAKE nothing for granted when buying a horse. One should make sure about doubtful things. If the eye cannot decide the matter the hand may be employed to corroborate or disprove; but the eye should be the main dependence and the hand used only as a last resort. An Irishman does not like to buy a pig "in a poke." He wants to see and examine the "rint payer" and may even make the animal squeal to be sure that he is getting his money's worth. In just the same way one must make the most careful examination of every part of a horse, "size up" the entire combination of points and make sure that there is lack of vice, soundness of eyes, wind and limb, and perfect fitness for the special kind of work the animal will have to do.

A famous veterinary teacher once called upon his senior students to examine a lame horse and state in writing what they thought was the cause of lameness. The horse had a splint, one sidebone and a small ringbone affecting the lame leg. To one or

other of these three unsoundnesses each student in turn attributed the lameness. But one learns best by making mistakes and this truth was soon "rubbed in" by the teacher. Having collected the reports he told the smith who was standing by, to remove the shoe from the lame foot. Then a majority of the students noticed for the first time that the sole of the foot was covered with a thick leather pad. When the leather came off puss spurted from a nail prick wound which had been purposely hidden. Lameness was due to the nail prick, not to splint, ringbone or sidebone, and the laugh was on the "boys." Never again would one of them be similarly caught and so a never - to - be - forgotten lesson was learned. Every intending purchaser should learn this lesson, too, and be a "doubting Thomas" until his hands have felt where the eyes could not definitely decide a mooted point.

Seek to deal with men of known integrity in business. If not expert, and the horse to be bought is a dear

Splint

Curb

one, it will be good policy to employ a veterinarian to make a critical examination. Better visit the stable when not expected and see the horse in the stall. There some things can be learned that will not be seen when the horse is warmed up. You should be able to enter and leave the stall on the left side of the horse, without being received with a bite or expelled with a kick. Note, too, if the horse digs a hole in the floor by pawing, or chews his manger and hay rack, which may indicate cribbing and wind sucking, or weaves from side to side, or pulls back on the halter. Make him "stand over" and note if he jerks up a hind leg, or hops over. The hopping may indicate spavin lameness, which quickly disappears when the horse is warmed up.

The jerking up of a hind leg may be accompanied by quivering of muscles and tail and such a horse is a "shiverer" or "crampy" and afflicted with incurable St. Vitus' dance. The symptoms of the latter disease become more apparent as the horse backs out of the stall, but quickly subside with slight exercise. If the animal has "string halt" the jerking up of the hind legs is continued as long as the horse is in motion, he does not warm out of it. When a horse is brought out for inspection "on a run" or "dead jump" it is impossible to detect spavin lameness or chorea and even string halt may not be noticed. This will be more certainly the case if the horse is turned loose in deep snow, or plowed land, or in a straw bedded paddock. This commonly is done. Sometimes an old plug that has scarcely animation enough to get out of its own way will kick up, strut and trot, proud as a peacock, when suddenly the halter shank, previously cut part way through breaks and the old pilgrim imagines he has broken loose by his own great strength. This trick is often tried. Never allow the dealer to keep the horse "in the air."

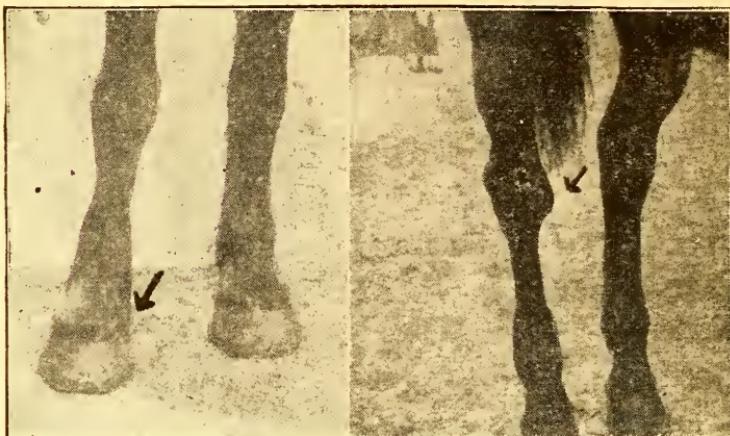

After making an examination in the stall watch the horse for a while as he stands at ease on a level floor. Maybe he cannot stand at ease. If a foot hurts, soon that foot will be thrust forward; if two hurt each will be thrust forward; if two hurt, each will be advanced turn about; if four hurt the horse will rest each foot in turn.

And do not forget to walk around the horse that every part may meet the eye. Often one side is a pretty picture, the other marred. See both sides, for often the animal is turned toward the wall if an eye is out, a big bare spot present or some unsoundness there that had best be kept hidden. A "watch" or "wall" eye can see, but it is unsightly. The tour of inspection around the horse discloses such blemishes.

Remember about not buying a pig in a poke, so remove the blanket from all fancy harness and see that the halter has no springs and trusses to press down upon the nostrils to prevent high blowing and "roaring." Many a man has neglected to remove a horse's hood before buying and afterward has discovered that it hid a cropped, lopped, or split ear, fistula of the base of the ear, a "poll evil" or some unsightly blemish.

Don't get too close to the horse when making the preliminary examination. Ex-Governor Hoard, of Wisconsin, once said that in farm business matters a man may hold a cent piece so close to his eye that it keeps him from seeing a big silver dollar a little further off. So if one rushes up and grabs a foot, before viewing what the French term the *tout ensemble*—the assemblage of all points—he misses the comprehensive estimate of the horse as a whole and that is of most importance. When one has looked the horse over from a little distance and from all points of view and has seen how the animal stands and behaves it will be time enough to scrutinize each component part of his anatomy. First we shall see him move away and back, at a walk, then at a trot, and finally we shall gallop him. Be there when he stops and so decide as to the soundness of his "wind." It is not enough to test the "wind" by standing the horse close to a wall and suddenly threatening to strike him with a whip. The sudden fright may cause the animal to grunt loudly, but this does not necessarily prove that such a "bull" is unsound in wind.

Many sound horses grunt when so threatened, or even when one goes to mount. In the latter instances it is a nervous "expression" and nothing serious. When watching the horse at rest one should note that he does not

Sidebone

Spavin

heave at the flanks, cough or pass gas from the rectum. These are the symptoms of "heaves"; but the "heavey" horse may be "shut" or "doped" with drugs so that temporarily the symptoms do not show. Usually they will quickly appear if the horse is given all the hay and water he wants and then is galloped. Roaring sometimes is temporarily relieved by plugging the nostrils with a sponge or squeezed half lemon. Discharge is also prevented by this means. It is best to locate these at once than have them sneezed into the feed box when the horse is yours.

At both walk and trot the horse should go straight, level and true, each joint perfectly fixed, the soles of the feet well turned up, as he goes away, and no "padding," "winging," in or out, "forging," stumbling or toe dragging noticeable. Lameness should be absent. If the horse passes muster when in motion and his style, action and conformation are suitable, he next may be critically examined as he stands at rest. He should stand square and firm on each foot. The profile of the front and back of each leg should show no abnormal bends, curves, puffs, swellings, or lumps. If any one of these things is seen its nature will have to be carefully determined. The eyes should be sound and of the same color. The pupils should dilate in the dark and contract when the horse is brought into the light. Angular, wrinkled eyebrows and sunken eyes denote previous attacks of "moon blindness" (periodic

ophthalmia). "Smoky" or "opaque," or "pearl grey," or "curdy" appearance of the cornea (anterior chamber of the eye) denote more serious stages of the disease or blindness from cataract or glaucoma. A brilliant sparkling prominent eye ("glassy eye") may be stone blind from paralysis of the retina and optic nerve. The ears should neither be absolutely unused, nor abnormally active. The former may indicate deafness; the latter, impaired vision, nervousness or vice.

See that a thread from ear to ear under the forelock, does not keep lop ears upright and that a leaden ball, suspended from a thread in the ear, is not preventing undue motion. The horse should let one handle his ears, his poll (back of ears), the top of the neck, where the collar will bear, and the withers, where fistulous openings or their scars so commonly are found. Fighting against such handling indicates a reason for fear and the reason usually is that a twitch has been used on the ear and the horse may be hard to shoe, have sore neck from the collar, poll evil or fistulous withers, or have suffered a previous operation for such disease.

Handle each part upon which harness will have to bear and see that it is sound and free from sores, tumors or abscesses. The nostrils should be large, under command of the will, rosy pink inside, not slit and free from abnormal discharge. See that the breath does not smell foul and

that the teeth are sound and the jaws not under or over "short." Examine the back. It should be strong, broad, straight, free from sores and well muscled. Pinching the loins is unnecessary. A ticklish horse will squat when so handled but the test does not detect weak kidneys. Note that the ribs are well sprung, the underline fairly straight, the abdomen capacious, the flank not tucked up and the coupling short and strong. See that no wounds or abscesses are present high up on the right flank, as the result of tapping for flatulant colic. With the left hand on the horse's loin, as a support, stoop and examine sheath, or udder as the case may be, and other parts high up in the groins.

Examine the tail, which should be strong, not artificial ("joined on") and not rubbed bare from itchiness. Lift it and see that the black skin below is free from tumors, the anus clean, well pursed up, free from scurvy substances or streaks of mucous; or, in the mare, that the space between rectum and vulva is intact and that no discharge comes from the latter. Looking from the rear, compare one hip with the other. If one is "knocked down" that side will be steep. At each side of the tail is the tuberosity of the ischium. Like the point of the hip (ilium) this often is fractured, leaving one side depressed. All parts of the shoulders, neck, barrel and hindquarters should be smoothly and deeply covered with sound muscles.

Now examine each hoof. Cracks, rings, ridges and meatiness should be absent, frogs and bars prominent, soles slightly concave, heels wide, coronets (hoof heads) open and strong, hoofs waxy, smooth and ample in size. Object to a horse that has steep narrow heels with a deep cleft in frog, also one that has chronic corns, chronic thrush, "dropped" (convex) soles, or hoof walls showing toe or quarter cracks.

Make sure that the elbows are free from hard or soft tumors or abscesses called "shoe boils" and that the knees are free from hairless scars and are straight, wide, deep and strong. All joints should be large, clean, bony

and strong. This is of the greatest importance. The joints cannot be too large so long as the size is made up of large, clean sound bones, ligaments and tendons. Beware of puffs, meatiness and bony growths which give the wrong sort of size. The knees should have perfect flexion, no matter what work the horse has to do. They should not be bent forward (buck knees) nor bent backward (calf knees). Splints close to the knee are serious; but low down, on an adult horse, they are practically harmless, unless struck by a shoe. Splints, ringbones and spavins are bony excrescences. Splints come on the cannon bones, along the course of the splint bones (small metacarpals and metatarsals).

Ringbones are found high, medium or low, on the long pastern, and often involve the short pasterns. Bone spavins are found at the lower, front, inner aspect of the hock joints. Bog spavins are soft bursal distensions of the hock joints, above and in front of the seat of bone spavins. Thoropins are bursal distensions seen at the sides of the hocks, towards the rear and when pressed on one side bulge out on the opposite side. "Wind galls" are similar puffs in connection with the tendons at and just above the fetlock joints. A curb appears as a hard enlargement giving a rounded bulging contour to the profile of the back of the hock joint, looking from the side.

Splints are most easily seen by standing in front of the horse, then examining further by feeling the parts involved, first with the foot standing down firm, then with it off the ground. Ringbones are best seen from a side view of the profile of the long pastern. The hand may have to help in their detection. To examine for spavins look between the forelegs at the inner, lower profile of each hock. The hard "knob" on one hock probably will prove to be a bone spavin. A small spavin is called a "jack" and it is apt to prove serious and grow to be a large spavin. Spavin may also be detected from a quartering view of the hock, or from the rear.

Pike County Farmers' Directory

Abbreviations Used in this Directory

a—Acres; Ch—Children; O—Owner; T—Tenant or Renter;
R—Rural Route; Sec—Section; Maiden name of wife follows
directory name in parenthesis (); figures at end of informa-
tion—year became resident of county. Star (*) indicates
children not at home. Name of farm follows names of children
in quotation marks. In case of a tenant, the farm owner's
name follows the figures giving size of farm.

EXAMPLE

Allen, Bent T. (Maggie Mellon) Ch William E., Clyde, Pearl, *Alfred I., *Nellie, *Lewis, *Harvey, *Charlie, *Maggie, *Clara; "Spring Branch Farm" Baylis R3 Fairmount Sec16-17 O40a (1862) Farmers Tel. Fishhook.

Means

Allen, Bent T.—Name.

(Maggie Mellon)—Wife's maiden name.

Ch William E., Clyde, Pearl, *Alfred I., *Nellie, *Lewis, *Harvey, *Charlie, *Maggie, *Clara—Names of children.

"Spring Branch Farm"—Name of farm.

Baylis R3—Postoffice Baylis, R. F. D. 3.

Fairmount Sec16-17—Fairmount township, Section 16-17.

O40a—Owner of 40 acres.

(1862)—Lived in county since 1862.

Farmers Tel. Fishhook—Name of telephone.

"The Finest Apple in All the World"

"STARK Delicious trees from your nurseries have been growing on my place for years and have never failed to produce a crop.

"As they grow older they bear more, larger, better fruit.

"Many apples have rather a spicy fragrance and flavor—but none has such a delicious combination as Stark Delicious! Stark Delicious is a gem—the finest apple in all the world."

—*Luther Burbank*

The "Wizard of Horticulture" said this about the apple tree that Stark Bro's discovered for the world of fruit lovers and fruit growers.

STARK DELICIOUS

STARK BRO'S. Most Famous Fruit Discovery

Every home—every market accords it first place. "The Money Maker of the Orchard." \$3.50 to \$5.00 per bushel are paid every day for this apple. Thousands of people plant Stark Delicious and other Stark Apple, Peach, Pear, Plum, Cherry Trees and Berry Bushes and Vines, for both home and market fruit—and grow corn and vegetable crops between tree rows. Make your spare land grow double crops—yield double profits also.

Wonderfully hardy, thrifty, quick growers and young, heavy and annual bearers everywhere. Regarding their hardiness, for instance, Harold Simmons, Minnesota horticulturist, declares: "This season in Minnesota showed the superior quality of Stark Delicious Apple and your tree's big bearing ability, as last winter proved its hardiness. It stood 50 degrees below zero without injury and bore a good crop."

Stark Trees Make \$60.00 Land Worth \$600.00

All crop profit records have been broken by Stark Trees all across America. In Calhoun Co., Ill., this past year Chris Ringhausen got \$41,500.00 for his apple crop in July before the fruit was matured. W. C. Curd, a Corn Belt farmer, cleaned up \$75,000 in the last three years off 110 acres of Stark Trees on land that cost him only \$25.00 an acre just a few years ago.

Judge Adam Thompson, of DeKalb County, Missouri, reports:—"I have always received top prices for all my apples because my Stark Delicious trees (from your nurseries)

sold the crop. Always refused to sell my Stark Delicious apples by themselves. Let them go only when crop of whole orchard was taken. When I planted this orchard, had I planted three-fourths of it Stark Delicious it would be worth three times as much as it is. This land was ordinary DeKalb County land, worth probably \$60 an acre. Yet I have refused \$600 per acre for my Stark Orchard. Why should I sell at that figure since it nets me 6 per cent on \$1200 per acre valuation every year?"

There's fruit profit facts for you! Want more?

Calhoun County Farmers' Directory

Abbreviations Used in this Directory

a—Acres; Ch—Children; O—Owner; T—Tenant or Renter;
R—Rural Route; Sec—Section; Maiden name of wife follows
directory name in parenthesis (); figures at end of informa-
tion—year became resident of county. Star (*) indicates
children not at home. Name of farm in quotation marks fol-
lows names of children. In case of a tenant, the farm owner's
name follows the figures giving size of farm.

EXAMPLE

Angle, William H. (Lizzie Johns) Ch Homer, Artie, Nellie, Roy, Edith, Erma;
Hamburg R1 Bellevue Sec23 T160a John Sueling (1875) Farmers Line
Hillcrest

Means

Angle, William H.—Name.

PITTSFIELD, ILLINOIS

Dairy Men, Attention!

I am a home institution. I help you to keep all soil fertility on the farm, except the rich cream I produce, and that you should ship to

THE PIONEER CREAMERY COMPANY QUINCY, ILL.

One of the well-known concerns of Central Illinois, who have built up an enviable reputation through the manufacture of "Corn Belt" and "Pioneer" Butter.

The Pioneer Creamery Company will give you top prices and quickest returns on your shipments.

I have been producing cream for them for the last 18 years and find there is none better than the old reliable Pioneer Creamery Co., Quincy, Ill.

Your friend,

A HUMBLE COW.

Knowledge Is Power

The knowledge of explosives makes the destruction of a mountain a comparatively safe, simple and easy matter for the men who understand their use.

The knowledge of live stock marketing and our daily contact with the various buyers, watching their ways and what they buy and how much they buy—keeping in constant touch with supply and demand—gives us an understanding of selling live stock that puts the BEST PRICES in our Shippers' pockets.

Harrison Meserve

Takes this opportunity to extend to all friends who admire and love a fine horse a cordial invitation to visit his select stable of Pure-bred horses, believing that their quality and superior breeding will appeal to the most fastidious.

Mr. Meserve has been actively engaged in handling horses at Pittsfield for over thirty-three years, and his stables consist of the following:

Direct Gentry, 2:05 $\frac{1}{4}$, Two Full Blood Percherons, Pascal No. 63,858 and Diavola 102,194, a good son of Heir-at-Law 2:05 $\frac{1}{4}$ and a mammoth Jack Taxpayer IV.

J. A. MANN & SON

THE OLD RELIABLE

Wholesale Dealers in

Poultry, Calves, Eggs, Roots,
Nuts, Junk, Hides, Wool,
Furs, Etc.

POULTRY and LIVE CALVES
Barred Rock Chickens
a Specialty

We always pay from one to five cents over the St. Louis market for straight coops of Plymouth Rock or Rhode Island Red chickens.

Also our Mr. J. A. Mann is considered the best live calf salesman in the St. Louis market.

Paper and metal tags furnished free on request.

Price lists at all times by return mail.

CONSIGN YOUR LIVE STOCK TO

McCausland, Hoag & Vaughan

LIVE STOCK

COMMISSION

THIS COMPANY IS ONE OF THE OLDEST, STRONGEST FINANCIALLY AND MOST SUCCESSFUL DOING BUSINESS AT THE UNION STOCK YARDS, CHICAGO. OUR LOCATION FOR HANDLING CATTLE ADJOINS THE EXCHANGE BUILDING. OUR HOG ALLEYS AND SHEEP PENS ARE AS ADVANTAGEOUSLY LOCATED AS THE BEST.

WE KNOW THE REQUIREMENTS OF THE MAN HAVING CATTLE, HOGS AND SHEEP ON THE MARKET AND OUR ABILITY TO MAKE BEST SALES AND RENDER UNEXCELLED SERVICE MAKES A PERMANENT CUSTOMER.

WE ASK FOR YOUR CONSIGNMENTS OF LIVE STOCK STRICTLY ON THE MERITS OF OUR CONCERN.

ASK A CUSTOMER OF OURS IN YOUR SECTION OF THE COUNTRY REGARDING OUR COMPANY. WE ARE SURE HIS RECOMMENDATION OF US WILL INFLUENCE YOU TO CONSIGN TO US.

WRITE US AT ANY TIME REGARDING WHAT YOU HAVE FOR IMMEDIATE OR FUTURE SHIPMENT.

ROOMS 38 to 42 LIVE STOCK EXCHANGE BUILDING
UNION STOCK YARDS, CHICAGO, ILLINOIS

Getting the Full Market Value

CLEVER stunts and slick tricks are very poor help in selling live stock. The buyers are too wise.

Honesty, good service, knowledge and experience are the tools used by our tactful salesmen.

They can be depended upon to get the full Market Value every day in the year.

Shipments at the River Yards will receive my personal attention.

C. R. SHAW

BREEDER AND SHIPPER OF
BIG TYPE POLAND CHINA HOGS
FARM ONE-HALF MILE SOUTHEAST OF
PITTSFIELD, ILLINOIS

MY ONLY HOBBY:

A Breeder for Pleasure as Well as Profit

RIGHT WITHIN ARM'S REACH you have hogs with BLOOD LINES EXCELLED BY NONE. Improve your herd by buying a SHAW BRED PIG. They are winners, and will help stretch your dollars. Buying the right hog, at the right price, is NOT MONEY SPENDING,—it is a dividend paying investment, and when you buy one from SHAW, your investment is the very best you can make. It will pay you to visit this herd, of from 300 to 500 head, when purchasing a Herd Boar, or when looking for a GOOD sow or gilt. They go from SHAW'S HERD into EASY MONEY on Pike County farms.

Hogs are a live issue these days, and my herd contains AS GOOD ANIMALS AS CAN BE FOUND IN ANY HERD, so say the best Fieldmen. You are cordially invited to visit my herd at any time, and attend my sales in October and February of each year. These sales are held in the Warehouse at Pittsfield, regardless of weather, with seats for 1,000, lights and heat. Write for catalogue, prices and description. Better yet: Come and SEE,—if you see them, you'll want them.

NOTHING IS EVER SETTLED until it is settled RIGHT! Settle your hog problem RIGHT with a SHAW BRED PIG.

C. R. SHAW

1900

1919

(Not Incorporated)

Drovers Commission Company

We buy and sell Cattle, Hogs and Sheep on Commission and we are prepared to transact all business intrusted to us in a thorough and up-to-date manner. At all times our service must be equal to the best. A trial on your part will convince you that we know our business. Financial standing as good as anybody's. References: Any person or banker with whom we have transacted business. Market literature furnished on application.

We prefer to be known as the best commission house, rather than the largest. Our aim is to do many things for a few customers, rather than a few things for many customers.

KILLING RATS

From Prairie Farmer.

Saturate cloths large enough to fill the entrances of the holes with carbon-disulphide, perhaps a large teaspoonful to each cloth. Poke the cloth down as far as possible, then fill in with dirt. This gas is very heavy and when it evaporates it settles into the bottom of the holes, killing old and young. This gas is also very satisfactory in killing gophers and woodchucks.

Come and See The
Alamo Electric Unit
For Farm Lighting

THE Alamo Electric Unit is just what you have always had in mind—a safe, complete, economical, trouble-proof, simple, compact electric light and power plant.

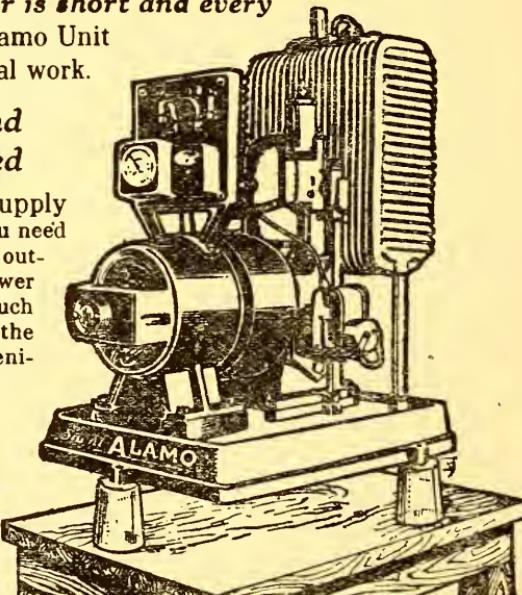

Nowadays, when labor is short and every minute counts, the Alamo Unit will save its cost in actual work.

*All the Light and
Power You Need*

The Alamo Unit will supply you all the Electric Light you need about the house, barn and out-buildings. And plenty of power to run all light machines, such as the churn, the separator, the water pump and other conveniences.

*Let Us
Demonstrate*

We want to show you the Alamo Electric Unit and explain its exclusive features to you whether you are ready to buy or not. At least see and learn about it.

Feeds That Produce the Utmost In Results

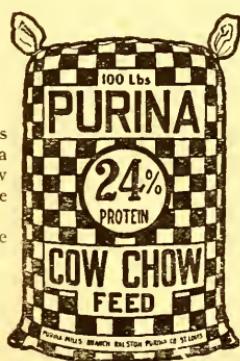

Almost everyone knows about PURINA FEEDS for all livestock. PURINA FEEDS are made by the largest organization of its kind in the country. Thousands of farmers, dairymen and livestock owners in all parts of the United States agree that Purina Feeds are the most productive feeds made.

Purina Feeds are manufactured on a scientific basis, balanced to meet the particular requirements for the purpose intended—they contain no cheap by-product fillers or other adulterations.

are made to produce the utmost in results. There is no guess work about Purina Feeds. From the guaranteed Purina chicken feed to the wonderful milk producing Purina Cow Chow you are assured of the very best that modern knowledge can produce.

If you want to know more about Purina Feeds write direct to us.

Afraid to Cut Into Another!

A TALE WITH
A MORAL

II

Once upon a time an old lady who had cured a number of hams cut into one of them when she had threshers for dinner and was heartbroken to discover that the ham which looked so tempting had soured and was unfit for use. She left the others hanging in the smokehouse and when asked why she did not cut into one of them once in a while replied, "I'm afeered I'd find it spoilt."

The old lady's reluctance to court a second disappointment is closely related to the attitude of a great many live stock shippers. Choosing commission service at random was never a business-like way of getting the best. When you hear a stockman remark that "all commission firms are alike" and that "there is mighty little difference in the service rendered," you may reasonably conclude that he has made comparison of his returns from two or three random shipments. He is "afraid to cut into another ham," because those which appealed to him in the first place proved none too palatable.

The main trouble with a shipper of this type is that he does not know that the best cured and the soundest ham in the lot still remains hanging in the smokehouse of commission service. It is stamped plainly with "Sales that Suit" and full measures of actual Merit and Experience were used in the curing process. Whenever you find yourself in a doubtful frame of mind we suggest that you look for the brand, "Sales that Suit," and bill your shipment to Clay, Robinson & Co.

FIRST NATIONAL BANK of PITTSFIELD, ILLINOIS

CAPITAL, SURPLUS AND UNDIVIDED PROFITS \$370,000.00

The largest of any bank in the state in a community of 2500 people.
Asks to be judged and compared with other banks
seeking your account.

By comparing the capital, surplus and undivided profits.

" " Length of public service with our 54 years.

" " Experience of its officers with ours.

" " Its record with service to the patrons and the nation.

" " Its motto, "In doing business study the welfare of the
patron rather than the question of profit to the bank."

Then say if its \$1,600,000.00 assets does not make it the best possible
to care for your banking interests.

THE **BEST** INSURANCE AGENCY IN PIKE COUNTY

"GOOD" to be sure

"BETTER" to be insured

"BEST" to be sure your Live Stock is insured in the Hartford under the same management as the Indiana and Ohio Live Stock Insurance Co. Insure Horses, Mules, Cattle and hogs against death from any cause. Pioneer in its line in Pike County, Ill. Been writing this class of business since 1903 and have paid in full every death claimed, not one unpaid, not even a postage stamp taken from the loss when death comes. "That is Protection." Also I am a representative of the old Aetna Insurance Co. of Hartford, Conn., and in this grand old company I write all my Farm policies, which include dwellings, household furniture, barns and all other farm buildings; hay, grain, vehicles, implements, horses and cattle, hogs, sheep, goats, silos and all other personal property on the farm. I also write city, village and town property of all kinds at reasonable rates in the companies known all over the U. S. as dependable companies, viz.—Aetna Fire Ins. Co. of Hartford, Conn., American Insurance Company of Newark, N. J., The Franklin Fire Ins. Co., of Philadelphia, Pa., The Hartford Live Stock Ins. Co., of New York, The Aetna Life Ins. Co., and its affiliated Aetna companies. Thousands of dollars paid to policy holders for losses which have occurred in my agency. Strong, Prompt, Dependable, Millions of dollars back of my agency. Look me up, write, call at my residence. Phone me at my expense, as I am at your service. SAFETY FIRST.

THIS AGENCY FOR AUTOMOBILE INSURANCE.

THRESHING MACHINE INSURANCE

in the Security Insurance Company of New Haven, Conn. One of the strongest and oldest companies in this country. Let me explain this splendid policy.

HARRY C. MILLER
General Insurance Agent

Pittsfield - Illinois

FRANK G. TURNER

HEATING *and* PLUMBING

All systems of heating—
Hot Water, Steam, Vapor,
Hot Air.

My specialty—Hot Water
heating.

Plumbing in all its branches
—None but the best of ma-
terials used.

Farm Lighting Plants with
the Famous Edison Storage
Batteries. Plants Guar-
anteed for five years.

“Leader” Water Systems
Have running water in your
home.

—

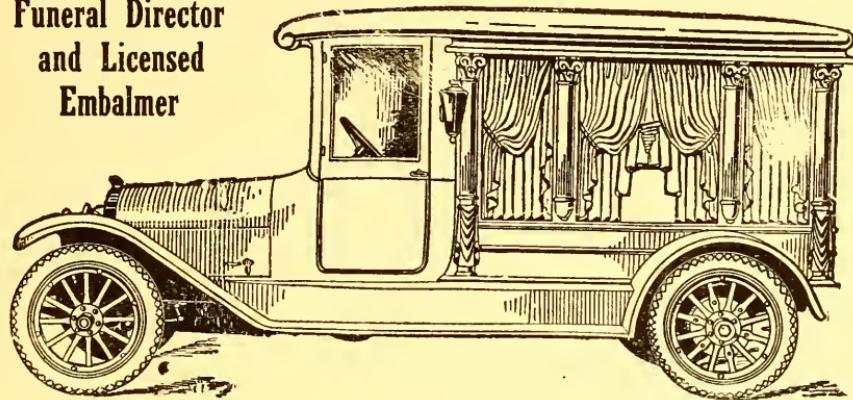

My motto: Not how cheap
but how good.

Pohlman, John H. General Store

 **E**VERY ROAD HAS TWO ENDS—
at one end the farm; at the other
the country town. Each depends
on the other, and both prosper together.
When broad-minded merchants and the
progressive farmers work together for the
good of the community, then you have a
community worth living in.

COST NO MORE

LALLEY-LIGHT

"Always Runs and Runs Right"

ELECTRIC LIGHT AND
POWER FOR EVERY FARM

We install the plant, wire your buildings and furnish electric fixtures complete. Installed by expert mechanics and service guaranteed.

LASTS MUCH LONGER

Since the first Lalley-Light Plant was sold down to the present time, we do not know of one that has worn out in normal service. We do not know of a single dissatisfied owner. It has proved its low cost, its absolute safety, its reliability wherever it has gone. Write us today for complete detail and cost of plant.

A SELLING HINT

When a customer comes into your store and does not ask for the article wanted by brand name, it is a good thing to ask, "What brand did you buy last?" or "What has given you the best satisfaction in the past?" No article has ever been made that suits everybody. What you are sold on may not please your customer. Even if you do not carry the brand that has given your customer satisfaction in the past, you are better able to please your customer by having a standard to go by. Further, by getting the customer's ideas, you carry the thought that your aim is your customer's satisfaction. Such an atmosphere breeds repeat orders.

To the People of Pike County:

You are invited to visit our store, we sell

FURNITURE, STOVES, RUGS

in fact

EVERYTHING TO FURNISH THE HOME

If we have what you want, we will be pleased to serve you

The Price, Service, Quality and
Appreciation will be right

FERTILITY IN MANURE, ROUGH FEEDS, AND FERTILIZERS

Material	Pounds Per Ton				Market Value Per Ton			
	Nitro- gen	Phos- phorus	Potass- ium	Nitrogen	Phos- phorus	Potassium	Total	
Fresh farm manure	10	2	8	\$ 1.50	\$.24	\$.48	\$ 2.22	
Barnyard manure	10	3	8	1.50	.36	.48	2.38	
Corn stover	16	2	17	2.40	.24	1.02	3.66	
Oat straw	12	2	21	1.80	.24	1.26	3.30	
Wheat straw	10	2	14	1.50	.24	.84	2.58	
Clover hay	40	5	30	6.00	.60	1.80	8.40	
Cowpea hay	43	5	33	6.45	.60	1.98	9.03	
Alfalfa hay	50	4	24	7.50	.48	1.44	9.42	
Raw bone meal80	180		12.00	18.00		30.00	
Steamed bone meal	20	180		3.00	25.00		28.00	
Acidulated bone meal	40	140		6.00	16.80		22.80	
Raw rock phosphate		250			7.50		7.50	
Acid phosphate		125			15.00		15.00	
Wood ashes		10	100				7.20	
Complete fertilizer	33	88	33	(?)	(?)	(?)	23.00	(?)

About two tons of fresh farm manure are required to produce one ton of common barnyard manure six months old, with losses as indicated.

This is the average composition and the average selling price of twelve brands of so-called "complete" fertilizer offered for sale in Illinois. Only 70 pounds of the phosphorus is guaranteed available, 18 pounds being insoluble. The cost of this 88 pounds of phosphorus in raw rock phosphate would be \$2.64.

Cyril G. Hopkins, "Soil Fertility and Permanent Agriculture."

The Cleveland Tractor

A BRUTE FOR WORK

CLETRAC

(TANK TYPE TRACTOR)

Why are so many farmers buying the tractors with treads instead of wheels? Because they see the advantage of having a tractor that is on top of the ground all the time and isn't wasting power by pushing the dirt ahead of the wheels. Also they know that the soil can't be packed with only $5\frac{1}{2}$ pounds pressure per square inch, which is all that the CLETRAC has.

We are selling the Cletracs in good numbers now but we want to see more of them out for the summer plowing. Ask the man who owns one and satisfy yourself that he has a real machine.

Write or call us for a demonstration or a catalogue at once.

A complete Service Department on all our Tractors.

Griggsville Automotive Sales Co.

LEADER TRACTOR MAKES PLOWING RECORD LEADER PLOWS 160 ACRES IN 168 HOURS

That is the record made by Oscar Bruikholtier with his Leader 12-18 Tractor. He plowed an acre an hour, using only 148 gallons of distillate (cost 10c per gallon) in plowing 160 acres. How long would it take to plow 160 acres with horses? With a four horse team and gang, it would take forty days, and the cost would be much more.

Leader Tractors are Made in Two Sizes

the 12-18 which pulls two to three plows, and the 18-36 Crawler type which pulls four to six plows and will travel almost anywhere over soft ground and muddy roads—or over rough stony ground. The Crawler adapts itself to the ground over which it travels.

You owe it to yourself to find out how LEADER TRACTOR will increase your farm profits. Write us today for the catalog, or better still, come to Quincy and see how Leader Tractors are made and find out what they will do for you. We are right near, where you can always get prompt service and repairs on a moment's notice.

QUINCY, ILLINOIS

The Big White Store

The greatest department store in this section of the country, the largest buying power; therefore, lowest prices on finest quality merchandise in **Furniture, Dry Goods, Rugs, Draperies, China-ware, etc.**

WE PAY MILEAGE

Notice!

Many times you have read an advertisement in Prairie Farmer of something you would like to buy, but you did not know where to find the store that sold it. You decided to look for this article when you were next in town and you tried several stores without finding it. Then you gave up in disgust. A two-cent stamp or a postcard addressed to the manufacturer saying "Please advise me who handles your goods in my town. If you have no dealer in my town, give me the name and address of your nearest dealer", would get you accurate information by return mail. Try it. It works and saves time.

OUR CONVENIENT LOCATION in the "heart of Hannibal's business district" allowing you maximum time to shop and compare values, together with our advantages of the "CASH" system in the pricing of merchandise should be considered by you in arranging your next trip to Hannibal.

"The New Dry Goods Store"

Heavy Hardware and Farm Implements

When building a silo, why not build with permanence. Use the Lansing Vitrified glazed tile with the ship-lap joint. Ship-lap block is superior owing to its construction which means strength and durability. Lansing's Silos are ever lasting. Guaranteed against Silage pressure, Wind or fire.

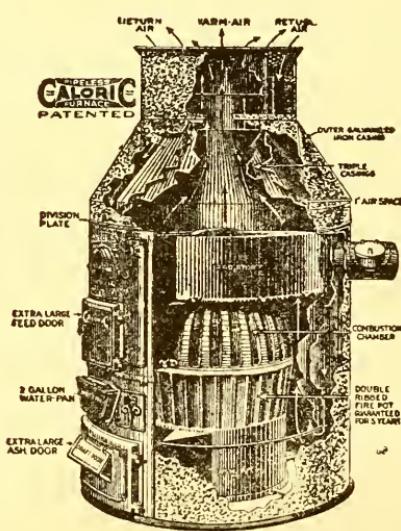

We Sell and
Recommend

the Following
Triple-G Goods

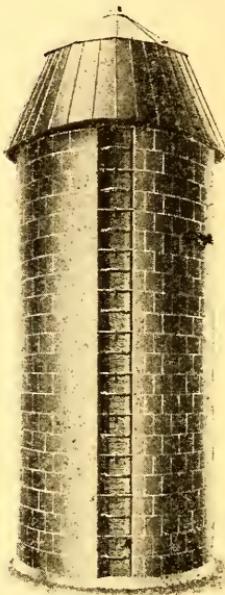

Fairbank Morse Gasoline Engines, Knapheide Wagons, Buck-eye Incubators, Diamond Automobile Tires, Dexter Double Tub Washers, Deering Binders, John Deere Reliance Buggies, Deere and Hayes Planters, Primrose Cream Separators, New Peoria and Moniter Grain Drills, John Deere Low Down Spreader, I. H. C.

Spreader, Wenzleman Straw Spreader, Cow Boy Tank Heater and Electric Wheel wk. Tractor
We want your business.

A furnace with no pipes. Think of it! Stands in the cellar directly under the register and pours heat up through all the house, warms the farthest corner and maintains a temperature there, but two or three degrees less than in the room where the register is. Very economical too. Positively guaranteed to save at least one third of your fuel —coal, coke or wood.

H. G. GARRELT'S & SONS :: Wall Paper, Paint, Brushes

Don't let Time and Weather Rob you of what you've got, Protect it.

INSURE IT BY USING GOOD PAINT

Look over your Buildings and Implements and see if they don't need paint, then think how cheap the best paint is against new lumber or new implements.

Write today for a free copy on Home Decorations and color cards.

When you think of Paints think of Garret's.

We Sell and
the Following

PROTECT YOUR HONEST DOLLAR

To Prairie Farmer Readers—

Don't buy cheap, unadvertised goods, but protect yourself when buying by insisting on getting from your dealer only—

All Goods Advertised in Prairie Farmer are TRIPLE-G Goods.
All Goods Advertised in This Directory are TRIPLE-G Goods.

When the local dealer says in his advertisement:

**"We Sell and Recommend the Following
TRIPLE-Guarantee Goods"**

as in any advertisement in Prairie Farmer or in this
Directory, it gives you this TRIPLE-Guarantee

- 1st That the manufacturer of the goods stands back of them.
- 2nd That the Prairie Farmer stands back of them.
- 3rd That the merchant handling the goods stands back of them.

"[©]TRIPLE-Guarantee Goods"

Are the best value for the money.

Safest to buy.

And Satisfaction is absolutely insured.

What Are "TRIPLE-G" Goods?

WHY should you ask for them and refuse any other kind?

WHEN a reader of Prairie Farmer goes into a store to buy, he is assured of getting full value for his money if he insists on buying only well known advertised goods and refusing to buy any unknown brand substitute.

WHY? Because advertised goods are well known goods that are backed up with the guarantee of PRAIRIE FARMER and the manufacturer. If the goods are not as represented in the advertising, or do not give full satisfaction, this TRIPLE GUARANTEE means that you have only to make your complaint and that any just claim will be fairly considered and your money paid back in case the goods are not as represented. This is PRAIRIE FARMER'S FAIR PLAY POLICY with its readers. We back up every advertisement in PRAIRIE FARMER and guarantee honest treatment. No humbugs, swindles or cheap substitute goods (that are made to sell and get the customer's money on false pretenses) are advertised in PRAIRIE FARMER. Buy the goods advertised in PRAIRIE FARMER and in this Directory and you are taking no chances. You are guaranteed satisfaction because all goods we advertise are

TRIPLE-GUARANTEED GOODS

1918

Guaranteed by the Manufacturer, the Dealer and the Publisher.

VIABILITY OF GARDEN SEEDS

In his book, *Productive Vegetable Growing*, Prof. John W. Lloyd, of the University of Illinois horticulture department gives the following as the length of time seeds may be expected to retain their vitality:

	Years		Years
Asparagus	5	Mustard	4
Bean	3	Okra	5
Beet	6	Onion	2
Cabbage	5	Parsley	3
Carrot	4	Parsnip	2
Cauliflower	5	Pea	3
Celery	8	Pepper	4
Corn, Sweet....	2	Pumpkin	5
Cress	5	Radish	5
Cucumber	10	Rhubarb	3
Eggplant	6	Salisbury	2
Endive	10	Spinach	5
Kale	5	Squash	5
Kohlrabi	5	Tomato	4
Leek	2	Turnip	5
Lettuce	5	Watermelon ..	5
Muskmelon	5		

It is always safest to test seeds that have been kept more than a year before planting, because they are not always kept under the best conditions and if not will deteriorate faster than is indicated in the foregoing table.

FARMERS AND BREEDERS, PIKE AND CALHOUN COUNTIES

AVERAGE WEIGHT OF LIVESTOCK

The average weight of cattle at Chicago for months mentioned was as follows:

	1915	1914	1913	1912	1911	1910	1909
January	1,027	996	1,002	1,018	897	1,019	1,025
February	1,041	1,013	1,006	990	1,031	1,019	1,042
March	1,055	1,012	929	991	1,030	995	1,022
April	1,089	1,036	1,040	999	1,068	1,036	1,055
May	1,075	1,021	1,040	994	1,080	1,024	1,482
June	1,076	1,008	1,069	999	1,036	1,006	1,092

"Replenish the earth and subdue it." Genesis 1:28.

**TEN MILLION TONS OF LIMESTONE NEEDED ON
ILLINOIS SOILS ANNUALLY**

How long would your bank account last, Mr. Farmer, if you never renewed it?

No more can you expect to draw on your soil account without you replenish it. Nature is both bountiful and patient, but she will not be denied. Write for prices today—do not delay, but again—write today.

When you go into a store to buy shoes, say to the clerk, "I want a pair of _____ shoes". Don't say, "I want a pair of shoes". If you name a brand of shoes you know will give you satisfaction, you not only say you want shoes, but you know about what you want. A clerk will always give closer attention to a customer who knows what he wants. It is human nature. The clerk will be more likely to give you satisfaction, even if he does not have the make of shoes you ask for, because he will know better what to show you, if you are willing to consider another make.

In Union There is Strength

The Keynote of Prairie Farmer's Protective Union is to Serve and Protect Prairie Farmer Readers

The greatest service rendered by Prairie Farmer's Protective Union is in investigating investment schemes, swindles, etc., and giving our members full information about them. Do not invest in any proposition, however attractive, until you have written us about it. If an agent calls on you with any scheme, with a new variety of seed, with a live-stock remedy, or with anything else about which you are not fully informed, write us before investing any money or signing any papers. Send us all the printed matter about the proposition that you can get, and we will make a full and impartial investigation and report promptly.

This service has already saved members of the Prairie Farmer's Protective Union thousands of dollars. We want to serve you, and the service will save you money.

If you have subscribed for Prairie Farmer and for the Directory you thereby become a member of Prairie Farmer's Protective Union. There are no other dues or charges.

Your certificate of membership is printed below. It entitles you to the full service of Prairie Farmer's Protective Union. Make use of this service freely by writing us whenever you want help or information.

Certificate of Membership

This certifies that
is a member in good standing of Prairie Farmer's Protective Union, and
is entitled to the full service of the Union without charge for the period
of his paid-up subscription to Prairie Farmer. All communications and
requests for service should be addressed to
